
SWU Erasmus Staff Mobility Portal

Handbook

Direct guide for first-time users

Document	User handbook
Scope	Current website functionality and navigation
Version	March 2026

What this handbook is for

This handbook explains what the portal can do and how to move through it. It is written for someone who opens the website for the first time and needs a clear overview without reading technical documentation first.

The portal is an internal university system for Erasmus staff mobility. It is used by three user groups:

- staff users, who create and manage their own mobility cases
- officers, who review submitted cases and documents
- admins, who manage users, master data, settings, and the audit log

1. Before you start

When you open the website, you begin in the public area. From there you can go to the login page, the registration page, or the system status page.

At the top of the page you will also see a language toggle. It uses the English and Bulgarian flags. Use it to switch the interface language. The selection stays active when you move to another page and also after you sign in.

2. Public pages

Home

The home page is the main entry point. It gives you the quickest routes into the system:

- **Login** if you already have an approved account
- **Register** if you need to request a staff account
- **Status** if you want to check whether the local system is running correctly

The home page is intentionally short. It is there to get you to the next step quickly.

Login

Use the login page if your account is already approved. Enter your email address and password and select **Sign in**.

Possible results:

- if the account is approved, you enter the protected workspace
- if the account is still pending, you are sent to the pending approval page
- if the account is rejected or deactivated, access is blocked
- if the credentials are wrong, the form shows an error

Register

The registration page is for staff accounts only. Fill in:

- first name
- last name
- email
- password
- password confirmation

After submission, the account is created in a pending state. You do not get dashboard access immediately.

Pending approval

This page confirms that your registration was received. It also shows that an administrator must approve the account before you can use the protected workspace.

Status

The status page is mostly useful for local operation and testing. It shows whether the application, database, and storage are ready.

3. How the signed-in area is organised

After login, the website changes into a protected workspace.

The workspace has three main navigation elements:

- a left navigation menu
- a page title and breadcrumb area at the top of each page
- a signed-in account area with role and account status

The left menu changes depending on your role. Not every user sees the same pages.

Common pages for all approved users

Page	Purpose
Overview	Common protected landing page after login
My profile	Edit personal and institutional profile information

Staff pages

Page	Purpose
Staff workspace	Main dashboard for staff work
New case	Start a new mobility case
Case detail	Open, update, submit, and monitor one case

Officer pages

Page	Purpose
Review dashboard	Review-oriented summary page
Review cases	Search, filter, and open all cases
Reports	Reporting and CSV export

Admin pages

Page	Purpose
Admin dashboard	Admin overview page
User management	Approve, reject, change roles, and deactivate users
Master data	Maintain faculties, departments, academic years, statuses, and settings
Audit log	Review important recorded actions
Reports	Same reporting area used by officers

4. Staff user guide

Step 1: Check your profile

After your first login, open **My profile**. This page stores the information the system uses in case ownership, filtering, and reporting.

The profile includes:

- first name
- last name
- email
- academic title
- faculty
- department

The faculty field is important for staff users. Department depends on the selected faculty. If you are not sure what to choose, update the profile only with values that match your actual assignment.

Step 2: Use the staff dashboard

The staff dashboard is your main working page. It helps you see:

- how many cases you already have
- whether you still have draft cases
- whether required documents are missing
- whether officers have added comments
- what still needs action from your side

If you already created a case earlier, the case overview table is the fastest place to open it again.

Step 3: Create a mobility case

Open **New case**. A case can be saved as a draft first and submitted later.

The form includes:

- academic year
- mobility type
- host institution
- host country
- host city
- start date
- end date
- optional notes

Use **Save draft** if you are not finished yet. Use **Submit case** only when the required information is complete.

Step 4: Reopen a draft

To continue working on a draft:

1. open **Staff workspace**
2. find the case in the overview table
3. select the link to open the case
4. update the fields
5. save again or submit

Step 5: Read the case detail page

The case detail page is where you follow the full life of one case.

It shows:

- the current case status
- the stored case details
- status history
- comments from the review side
- required document panels

When a case is already submitted, the page becomes read-only for staff until the workflow allows further changes.

Step 6: Upload documents

Each case has two required document types:

- Mobility Agreement
- Final Certificate of Attendance

Each document panel shows the current review state, the current version, the version history, and the upload action.

Important points:

- every upload becomes a new version
- older versions stay visible
- only one version is marked as current
- files are checked against the allowed extensions and maximum size

If a document is rejected, read the note first and then upload a corrected version.

Step 7: Follow comments and status changes

Use the comments and status history panels on the case detail page to understand what happened and what is still required.

This is the best place to answer questions like:

- Is my case still in draft or already under review?
- Did an officer reject a document?
- Was a correction requested?
- Has the case been completed or archived?

5. Officer user guide

Review dashboard

The review dashboard is a quick summary. It shows new registrations, open reviews, and the current academic year overview. Use it as a starting page.

Review register

Open **Review cases** when you need to work with the full case list. This page is built for searching and filtering.

You can combine filters for:

- status
- academic year
- faculty
- department
- mobility type
- country
- host institution

This is the main page for locating a case quickly.

Case review page

When you open a case from the register, you get the full review page. This page combines the main review actions in one place:

- read the case details
- review uploaded documents
- add comments
- mark missing documents
- change the case status

Comments

Use comments when you need to record a review note without changing the formal case status. Comments show the author and the time they were added.

Document decisions

Each document panel lets you accept or reject the current version.

If you reject a document, add a clear reason. Staff users can then upload a corrected version.

Status changes

Use the workflow status form when the formal case status needs to change. Status changes are recorded separately from document review.

This matters because a document can be rejected while the case status stays the same until you decide how the overall case should continue.

Archive

Completed cases can be archived. Archived cases are no longer active, but they remain searchable and can still appear in reports and exports.

6. Admin user guide

Admin dashboard

The admin dashboard gives a system-wide view with direct access to the main admin pages.

User management

This page is used for account decisions and access control.

Typical actions:

- approve a pending registration
- reject a registration
- change a user role
- deactivate a user

Sensitive actions require confirmation before they are accepted.

Master data

This page controls shared reference data used by the rest of the portal.

It includes:

- faculties
- departments
- academic years
- status definitions
- select-list values
- upload settings
- report display settings

Changes made here affect forms, filters, and reports across the system.

Audit log

The audit log is the place to check who did what and when. Use it when you need traceability for user changes, case actions, document review, and other protected operations.

7. Reports and CSV export

The reporting area is available to officers and admins.

You can filter reports by academic year, faculty, department, mobility type, country, host institution, and status.

The page supports:

- summary tables
- missing-document reporting
- filtered case lists
- CSV export

Available exports:

- filtered case register
- yearly summary
- faculty summary

Archived cases remain available in the reporting area.

8. Statuses at a glance

Case statuses

Status	Meaning
Draft	The case was started but not submitted yet
Submitted	The case was sent for review
Under Review	Officer review is in progress
Changes Required	Corrections are needed before the workflow can continue
Approved	The case was approved at the current review stage
Mobility Ongoing	The mobility period is in progress
Completed	The case is complete
Archived	The case is closed but still searchable

Document review states

State	Meaning
Not uploaded	No file is available yet
Pending review	A file was uploaded and still needs review
Accepted	The current version was accepted
Rejected	The current version was rejected

9. Practical tips for new users

- Use the left menu for normal navigation. It is clearer than relying on the browser back button.
- If you are a staff user, complete your profile before starting your first case.
- Save a draft if you are not ready to submit. You can always come back later.
- Read comments and document notes carefully before uploading a corrected version.
- Use filters in the officer register and reports. They are meant to be combined.
- If something looks wrong locally, check the `/status` page first.
- If you need Bulgarian, use the flag toggle at the top of the page before you begin working.

10. Current limits

This version already supports the full local workflow for registration, approval, case handling, document review, reporting, and audit tracking. A few things are still outside the current scope:

- password reset and email verification
- bulk officer actions
- saved views and pagination for larger operational queues
- non-CSV export formats
- deeper file inspection such as malware scanning
